A form of low-level *in vitro* mutation assay (Ditullio et al., 1973; Sibley and Smith, 1976) has been developed by the National Bureau of Standards, Bureau of Chemical Hazards, using non-proliferative methods to determine mutagenicity of substances, organic or inorganic, such as As^{III} . Thus, using the Ames test of As^{III} , it is found that the mutagenicity of the As^{III} salt of organo- As is about one-tenth that of As^{III} (Ditullio et al., 1973; Sibley and Smith, 1976).

2005-07-17 17:00:00 2005-07-17 17:00:00 2005-07-17 17:00:00 2005-07-17 17:00:00

The open frontier is made of 20,000 trees (just above timberline) at an elevation of 27,000 feet and an area of 27.04 haec. (TRECE, 2002). It is 10 km away from the nearest town of 100,000 habitants. There were no reports of tree felling or burning in a radius of 10,000 feet, and local people admitted to a strict control over the use of fire. At 2,110 haec. TRECE has developed four categories of 14,000 trees (just above timberline), that is about 10% of the total area.
