

## Minor Arterials, Rural

Rural minor arterial roadways provide passageways across segments of the rural portions of the community and connect to the regional arterial network, typically providing for open ditch drainage. Intersections are provided at all arterial, collector and local roadways and the minor arterial allows for local land access directly to the facility. Intersections with arterial roadways may be signalized or stop controlled. Minor rural arterial roadways are to provide one travel lane and a 6-foot wide shoulder in each direction. Intersections with other arterial roadways may be signalized or stop controlled and provisions should be made for left turn lanes to facilitate the through movements along the arterial. Access management practices should be employed to minimize the impacts of property access in the rural minor arterial facility.
